

System Requirement Specification for and Event Planner

System Requirements Specification (SRS) for your event management platform:

Functional Requirements:

1. User Registration and Profile Management:

- Users can create accounts and profiles.
- Users can log in and manage their profiles.
- Service providers can create profiles showcasing their services and expertise.

2. Event Creation and Management:

- Users can create events (weddings, parties, corporate events, etc.).
- Users can add event details (date, time, location, guests, etc.).
- Users can set reminders and notifications.

3. Service Provider Management:

- Service providers can create profiles and showcase their services.
- Users can search and book service providers (caterers, decorators, entertainers, etc.).
- Service providers can manage their bookings and communication with users.

4. Booking and Payment Processing:

- Users can book services and make payments through the platform.

- Service providers can receive payments and manage their bookings.

5. Event Planning and Organization:

- Users can plan and organize events, including managing tasks and timelines.

- Users can communicate with service providers and guests.

6. Review and Rating System:

- Users can rate and review service providers.

- Service providers can respond to reviews and ratings.

7. Cancellation and Refund Policy:

- Users can cancel events and receive refunds (partial or full) based on the cancellation policy.

- Service providers can manage cancellations and refunds.

Non-Functional Requirements:

- 1. Performance:** The platform should load quickly and respond to user interactions in a timely manner.
- 2. Security:** The platform should protect user data and ensure secure authentication and authorization.
- 3. Usability:** The platform should have an intuitive and user-friendly interface.
- 4. Scalability:** The platform should handle a large number of users and events without performance issues.
- 5. Compatibility:** The platform should be compatible with various devices and browsers.

Technical Requirements:

1. Front-end: Build the platform using a front-end framework (React, Angular, Vue.js) and library (Bootstrap, Material-UI).

2. Back-end: Use a back-end framework (Node.js, Django, Ruby on Rails) and database (MySQL, MongoDB) to store and manage data.

3. API: Design a RESTful API for interacting with the back-end and front-end.

4. Integrations: Integrate with external services (payment gateways, calendar APIs, etc.) as needed.

User Experience:

1. Intuitive interface: Ensure the platform is easy to navigate and use built using Figma.

2. Clear communication: Provide clear instructions and notifications throughout the platform.

3. Responsive design: Optimize the platform for mobile devices.

Key Features:

1. Service provider management

2. Event creation and management

3. Booking and payment processing

4. Review and rating system

5. Cancellation and refund policy

6. Advanced analytics

7. Integration with third-party tools

8. Virtual event capabilities
